The screenshot shows the '도메인 연결' (Domain Connection) page in the Dothome control panel. The left sidebar contains navigation links for various services like DNS, Hosting, and Email. The main content area is titled '도메인 연결' and includes a green information box with tips. Below that, there's a section for '도메인 연결 등록' (Domain Connection Registration) with a table showing product details and connection options. The '직접 도메인 입력하기' (Direct Domain Input) option is selected. A form below allows entering a domain (e.g., 'www') and includes a '도메인 확인' (Check Domain) button. At the bottom, there's a section for '도메인 연결 및 연결 해제' (Domain Connection and Disconnection) with a table that is currently empty, indicating no connections exist.
